

Группа: 102Фк

Специальность: Лечебное дело

Дата: 01.12.2020

Тема: Diseases. Diagnosis.

Цель: Развитие навыков поискового чтения, развитие умений и навыков работы с грамматикой

Задание лекции: Прочитать и ПИСЬМЕННО перевести текст

Домашнее задание: выбрать одно предложение, составить к нему общий и как минимум 2 специальных вопроса.

Предложения (именные)

- 1) For determining a disease it is very important to know its symptoms.
- 2) Some of these symptoms are objective , for example, haemorrhage or vomiting.
- 3) Other symptoms, such as headache or dizziness, are subjective.

### ***Diseases and Diagnosis***

Before treating the patient it is necessary to make a correct diagnosis of the disease and to determine its etiology that is the causes of the disease. The doctor must know well the pathogenesis of any disease, the way and mechanism of its development, as well as the symptoms by which it can be revealed.

A number of different procedures are used to establish a diagnosis; history-taking, physical examination, which includes visual examination, palpation, percussion, auscultation, laboratory studies, consisting of urinalysis, blood, sputum and other analyses; instrumental studies, for example, taking electrocardiograms or cystoscopy, X-ray examination and others.

For determining a disease it is very important to know its symptoms such as breathlessness, edema, cough, vomiting, fever, haemorrhage, headache and others. Some of these symptoms are objective , for example, haemorrhage or vomiting, because they are determined by objective study, while others, such as headache or dizziness are subjective, since they are evident only to the patient.
