to depend on type of a hospital department and specific character of her work there
- зависеть от профиля отделения и специфики ее работы в нем

Medical nurse of a treatment room - медсестра процедурного кабинета

Text

Hospitals are intended for treatment of patients in conditions of permanent establishment (лат. stationarius - стоящий* motionless). Here there is an emergency medical aid, and also the help to patients for whom constant supervision is necessary.

There are several specialized hospitals in Russia for the treatment of particular diseases-infections, psychiatric diseases, cancer, ophthalmological diseases and others.

Multi-field hospital consist of different hospital departments (surgical, therapeutic, infectious, cardiological.etc.)

Admissions department, ward for diagnostics, entrance hall for waiting , hospital departments, a chemist's , public catering organization . etc. form parts of frame work of a hospital organization. Every hospital department includes the next rooms: room for doctors, room for senior nurse (feldsher) , a treatment room , a bathroom , a lavatory .Every ward numbers 5-6 beds .Medical personnel of every hospital department consists of the head of the hospital department, medical staff (attending medical doctor, doctor on duty), nursing staff (senior nurse, ward nurse, dressing-room nurse, instrumental nurse) and junior personnel. A doctor on duty is the immediate superior over medical and nursing staff and junior personnel.

Functional duties of a nurse in hospital depends on type of a hospital department and specific character of her work there(Medical nurse of admissions department , surgical department, treatment room , ward nurse , dressing-room nurse , nurse-dietitian , masseur , laboratory assistant , etc) .Different types of doctors work at a hospital (therapeutics , surgeons , traumatologist , oculists ,cardiologists, etc.),
