

Группа: 201Ф

Специальность: Лечебное дело

Дата: 20.11.2020

Тема: Some medicaments

Цель: Формирование словарного запаса по теме

Задание лекции: перевести текст, найти определение понятия International Nonproprietary Names for Pharmaceutical Substances (INN)

Домашнее задание: из текста выписать те виды лекарств, которыми пользуются в вашей семье и для чего

***Например: We use painkillers when we have a headache***

We can see a lot of medicaments, while watching TV, or walking to the closest (ближайшую) chemist's. They are different. They can be pills, tablets, dusts, liquids and some other forms. People usually divide them into medicaments for newborn, children and adults.

If you're ill, you shouldn't go to the closest chemist's and take everything, you see and you have enough money. First of all, you must visit a doctor. If you can't go to the doctor, call the emergency.

When you get the prescription, buy the medicaments. Remember - you must take them as your doctor prescribed. Don't undertake or overtake the dose.
