Специальность: Сестринское дело

Дата: 23.11.2020

Тема: The local health service

Цель: Развитие навыков поискового чтения; Формирование словарного запаса по теме.

Задание лекции: ознакомиться с текстом о системе здравоохранения, ответить на вопросы после текста.

Домашнее задание: Написать 10 предложений о том, как изменилась система здравоохранения в результате нового вируса.

Health Service in Russia

The main principle of our Health Service is to prevent diseases, to strengthen the health of the people and to increase their longevity.

The Health Network of Russia comprises a great number of hospitals, polyclinics, out-patient departments and research institutes.

In Russia there are large centres of cardiology, surgery, oncology, ophthalmology, the First Aid Stations where many people are examined and treated.

New medical institutions are built and equipped with modern medical apparatuses and devices.

We have different sanatoria and rest-homes where a lot of our people rest and take the course of treatment. Many of them get sanatorium accommodation free of charge or pay only 10 per cent of the total cost of the voucher.

Much attention is paid to the health protection of mother and child. Mothers are given maternity leaves and paid leaves until the baby is three years old. The mother's job is reserved during the definite period.

We have maternity homes, nurseries, kindergartens and special hospitals.

There are rest-homes and sanatoria for mothers and children too. At present many sanatoria and rest-homes are presented to the mothers and children suffered from auto-immune problems. Many of them have the treatment and rest in other countries.

As for medical personnel much attention is paid to the training of doctors, nurses, obstetricians and others as they must take care about the health of our people.

Answer the following questions:

1. What is the main principle of our Health Service?
2. What medical institutions does the Health Network of Russia comprise?
3. Are there large centres of cardiology, surgery, oncology and others in Russia?

4. Are new medical institutions built?
5. Where do a lot of our people rest and take the course of treatment?
6. Is much attention paid to the health protection of mother and child?
7. What medical institutions do we have for mothers and children?
8. Whom are many sanatoria and rest-homes presented to?
9. Is much attention paid to the training of medical personnel?
